Commitment

When I develop a project I carefully maintain all the following parts like Security, Performance, User friendly, Bug free (security + frontend view), SEO friendly Code, Proper maintainability code etc.

Professional Experience

2015-2019
Full Stack Web Developer - Oxyzone
- I developed online web app using Laravel and Vue js
- Maintain hosting in AWS
- Maintain App Security

2013-2015
WordPress Theme and Plugin Developer - SoftHopper
- I developed WordPress Theme like (E-Commerce, Portfolio, NewsPaper, Real Estate, Wedding, Digital Download, Agency) etc
- I developed WordPress Plugin for Codecanyon and wordpress.org

2011-2012
Frontend Developer - Precursor Technology
- I developed a PSD, JPG or Project Idea to HTML Template
- Developed a Dashboard HTML Template

Portfolio

I've developed a lot of projects. Some are developed with a team and some are alone. To see my projects altogether, you can visit my personal portfolio. Some of my self developed projects are mentioned here.

My personal portfolio- https://therakib7.github.io

Here are some of my popular project:

Victim
This is a Digital Agency & Portfolio WordPress Theme
Technology Used: WordPress, Elementor Builder, WooCommerce, Mail

Chimp, Scss, Bootstrap4, jQuery etc
Site URL: https://demo.softhopper.net/victim

Wedding Reval
Wedding Planner & Agency WordPress Theme
Technology Used: WordPress, Elementor Builder, WooCommerce, Mail Chimp, Scss, jQuery etc
Site URL: https://staging-themelocation.com/wedding-reval

Lawn Care
This is the Lawn Cleaner Service WordPress Theme.
Technology Used: WordPress, Elementor Builder, WooCommerce, Mail Chimp, Scss, jQuery etc
Site URL: https://wplawn.tonytemplates.com

Oxyzone Money Transfer
This is the online mobile recharge, mobile banking and utility bill pay web app.
Technology Used: Laravel, Vue, AWS, AWS S3, Cloudflare, Redis, Web socket, Scss, MySQL etc

Other Experience

I have the following experience you can check.

Security Tester

Security is the most important part of a software. If you miss this part your site will be hacked at any moment. Then your business will become Hero to Zero within a single moment.

Depend on my experience I can say:

Secure Backend + Poor Frontend = Hacked

Poor Backend + Secure Frontend = Hacked

Secure Backend + Secure Frontend + Poor Server Security = Hacked

Personal computer low security = Hacked

And many more …

More than 100 ways a hacker can hack a website or a software. So everyone should be careful about each part of their site.

Performance

Performance is another important part of a software. If you missed the part your site will be slower. As a result, you lose your traffic and SEO Engine.

Depend on my experience I can say:

Speedy Backend + Slow Frontend = Slow Application

Slow Backend + Speedy Frontend = Slow Application

Speedy Backend + Speedy Frontend + Poor Database Design = Slow Application

And many more ...

Software Tester

Software testing is also an important part. If your software runs production mode without proper testing then the general user and also hacker found a lot of bugs. That will be a threat for your business and also too much updates will be required.

Full Stack Developer

If a developer or a programmer does not have full stack knowledge then backend and frontend developers sometimes face problems. Because frontend developer ready codes for backend programmer and backend programmer also ready codes for frontend developer. And sometimes backend programmers and also database designers face problems.

Full stack developers keep knowledge about **backend + frontend + database + server and almost everything**.

Worked at Envato (themeforest and codecanyon)

Themeforest and codecanyon are the number one product selling market place in the world. They maintain unique design and quality code. Almost 80% of the products are rejected on themeforest and codecanyon because of quality. I have 4 years experience working on themeforest and codecanyon and also developed a lot of WordPress Theme, WordPress Plugin, HTML Template, Laravel App etc.

User Friendly

User friendly design is also another important part. Most of the website remains unnecessary content. Sometimes a visitor is too touch to find the content as they want. Unfriendly designs lose your traffic.

A frontend developer should have minimum knowledge about:

- **Visual Hierarchy**
- **Typography**
- **Golden Ratio**
- **Font Pairing**
- **Color Scheme**

Best Practicing Code

Quality code is also an important part for performance, security and SEO. A problem can be solved in a different way but best practice solution is important. If someone writes unnecessary and unfriendly code then the site would be slower and also would be a problem for security and SEO.

Always like to learn about new technology

Though I always tried my best to provide the best task but I know nothing will remain best. Day by day best would be backdated. So I always like to learn about new technology.

Expected Salary

Depending on my experience my expected salary is US $20K-$120K yearly.

The salary range depends on what types of tasks I have to do and how much time I need to work.
